

Phase 1 -- Requirement Analysis & Planning

Implementation Roadmap & Milestones

Date	2026-07-01
Project Name	Automated Employee Onboarding & Offboarding System
Author	AYUB HUSSAIN SHAIK
Organization	SKILLWALLET INTERNSHIP
Document	Execution Roadmap

Overview

The delivery strategy encompasses structured phases that cover service catalog development, data structure configuration, automated workflow design, Service Level Agreement setup, comprehensive validation, and go-live activities.

Implementation Milestones

Milestone 1: Service Catalog Setup

Initiate the process by establishing service catalog items for both request types.

Success Criteria:

- Finalize design specifications for onboarding catalog item
 - Finalize design specifications for offboarding catalog item
 - Configure form fields with all necessary input variables
 - Validate that forms capture all required employee information fields
-

Milestone 2: Data Storage Infrastructure

Establish the foundational database structures for storing employee lifecycle information.

Success Criteria:

- Build custom tables for onboarding and offboarding request management
 - Specify table field definitions and establish field relationships
 - Implement storage mechanisms for employee profile data and request status tracking
-

Milestone 3: Workflow Engine Implementation

Develop comprehensive automated workflows to manage request lifecycle and departmental coordination.

Success Criteria:

- Architect workflow patterns in Flow Designer for request management
 - Establish approval request routing to manager-level personnel
 - Configure automatic task generation for HR, IT, Facilities, and Security departments
 - Enable workflow stage progression tracking
-

Milestone 4: Service Level Agreement Configuration

Define SLA parameters to guarantee timely task completion.

Success Criteria:

- Establish Service Level Agreement specifications
- Configure SLA trigger conditions and timer thresholds
- Implement SLA tracking and compliance monitoring mechanisms

Milestone 5: Quality Assurance & Validation

Conduct thorough testing protocols to ensure system reliability prior to deployment.

Success Criteria:

- Execute functional testing across all catalog items and workflow paths
- Confirm approval workflow execution and routing
- Verify task generation accuracy for each department
- Document and remediate any identified defects

Milestone 6: Production Launch & Optimization

Transition the solution to operational status and establish ongoing support.

Success Criteria:

- Execute production environment deployment
- Conduct stakeholder training and onboarding sessions
- Monitor system performance metrics and stability
- Gather user feedback for iterative improvements

Anticipated Outcomes

Successful implementation will deliver automated employee lifecycle request handling with minimal manual intervention.

- Efficient coordination between departments.
- Faster employee lifecycle management.
- Improved transparency and monitoring through automated workflows.
