

Phase 2 -- Backend Development & Configurations

Workflow Automation Strategy

Date	2026-07-01
Project Name	Automated Employee Onboarding & Offboarding System
Author	AYUB HUSSAIN SHAIK
Organization	SKILLWALLET INTERNSHIP
Document	Automation Logic

Executive Summary

ServiceNow Flow Designer serves as the orchestration engine for employee lifecycle processes. It automates request approval chains, distributes tasks across departments, maintains Service Level Agreements, and delivers status notifications to ensure seamless departmental execution and organizational visibility.

Implementation Components

Component 1: Automated Workflow Development

Purpose: Establish intelligent request routing and execution mechanisms

Activities:

- Engineer workflow patterns using Flow Designer capabilities
- Establish request flow initiation on catalog submission events
- Route request records to appropriate manager-level approvers
- Initiate workflow stage progression upon approval events

Projected Outcomes:

- Intelligent request routing eliminating manual intervention
 - Decreased administrative overhead in approval management
-

Component 2: Workflow Action Orchestration

Purpose: Implement automated task creation and communication workflows

Activities:

- Configure automated task generation for **HR, IT, Facilities, and Security** personnel
- Implement dynamic request status updates reflecting workflow progression
- Configure **Service Level Agreement tracking** for time-sensitive tasks
- Deploy **automated email notification** system for stakeholder communication
- Establish completion verification logic prior to request closure

Projected Outcomes:

- Automated distribution of departmental responsibilities
 - Real-time request status visibility for all stakeholders
 - Enhanced departmental coordination efficiency
 - Accelerated lifecycle process execution timelines
-

Projected Impact

Implementing comprehensive automation will deliver end-to-end employee lifecycle workflows with enhanced transparency, accountability, and operational efficiency.
