

Phase 4 -- Data Migration, Testing & Security

Quality Assurance & Validation Testing

Date	2026-07-01
Project Name	Automated Employee Onboarding & Offboarding System
Author	AYUB HUSSAIN SHAIK
Organization	SKILLWALLET INTERNSHIP
Document	QA Testing Plan

Overview

Comprehensive QA verification was executed to confirm complete request lifecycle functionality for onboarding and offboarding processes. Real-scenario simulations validated system handling of request generation, approval routing, task distribution, SLA performance, notification delivery, and request completion.

Verification included **ServiceNow system audit logs and transaction history** review to confirm correct execution of each workflow stage.

Validation Test Coverage

The following system components underwent testing:

Test 1: Request Generation

- Submitted sample lifecycle requests through the Service Portal interface
- Verified successful creation of requests within **Employee Lifecycle table**

Test 2: Approval Workflow Routing

- Confirmed automatic request transmission to **assigned manager** for authorization
- Validated that approval actions triggered subsequent workflow phases

Test 3: Departmental Task Distribution

- Verified automatic task creation for relevant departments:
 - IT Department
 - Facilities Department
 - Security Department
- Confirmed each team received appropriate task assignments

Test 4: Service Level Agreement Monitoring

- Confirmed **Service Level Agreement (SLA)** application to task assignments
- Validated monitoring of task completion timeline adherence

Test 5: Automated Notification Delivery

- Verified **automated email notification** delivery during key workflow transitions:
 - Request submission
 - Approval completion
 - Task assignment
 - Request completion

Test 6: Request Completion & Closure

- Verified automatic request status progression during workflow phases
- Confirmed **automatic request completion** after all departmental tasks finish

Verification Tools & Methods

To confirm proper system operation, the following validation instruments were utilized:

- **ServiceNow System Audit Logs**
- **Transaction History Records**
- **Request Record Verification**

These tools confirmed successful execution of each process phase.

Verification Report Access

To review request generation records:

1. Navigate to **Reports** â†’ **All**
 2. Search for **sc_request**
 3. Open report to view generated requests and current status
-

Projected Results

- Successful request generation for onboarding and offboarding processes
 - Correct approval workflow routing to managers
 - Automatic task assignment distribution to departments
 - SLA monitoring for task performance
 - Email notification delivery during workflow progression
 - Automatic request completion after departmental task fulfillment
-
