

Phase 5 -- Deployment, Documentation & Final Presentation

Setup & Configuration Manual

Date	2026-07-01
Project Name	Automated Employee Onboarding & Offboarding System
Author	AYUB HUSSAIN SHAIK
Organization	SKILLWALLET INTERNSHIP
Document	Setup Manual

Description

This document provides a **step-by-step guide to replicate the solution in a new ServiceNow Personal Developer Instance (PDI)**. It explains how to configure catalog items, variables, UI policies, workflows, access controls, and testing procedures to successfully implement the automated onboarding and offboarding system.

Implementation Steps

1. Create the Catalog Item

Navigation

Steps

1. Click **New** to create a new catalog item.
2. Configure the following details:

Field	Value
Name	Onboard / Offboard Employee
Catalog	Service Catalog
Category	HR Services
Description	Request for employee onboarding or offboarding

3. Save the catalog item.
-

2. Configure Catalog Variables

Add variables to capture employee lifecycle information.

Key Variables

- Request Type
- Employee ID
- Department
- Manager
- Joining Date
- Exit Date
- Assets
- Access Details

Steps

1. Open the catalog item.
2. Navigate to **Variables** related list.
3. Click **New** and add the required variables.

4. Save all variables.

3. Configure UI Policies

UI Policies dynamically control field visibility based on request type.

Example Policy

Condition	Action
Request Type = Onboarding	Show Joining Date
Request Type = Offboarding	Show Exit Date

Steps

1. Open the catalog item.
2. Navigate to **Catalog UI Policies**.
3. Click **New** and configure the policy condition.
4. Add **UI Policy Actions** to show or hide relevant fields.
5. Save the configuration.

4. Configure Flow Designer Workflow

Navigation

ServiceNow > **Flow Designer**

Steps

1. Click **New Flow**.
2. Add a trigger:
 - **Service Catalog > Catalog Item Requested**
3. Configure workflow steps:

Step 1: Manager Approval

- Send approval request to the employee's manager.

Step 2: Department Task Creation

- HR Task
- IT Task
- Facilities Task
- Security Task

Step 3: Status Update

- Update record in **Employee Lifecycle table**.

Step 4: Notification

- Send email notifications for approvals and task completion.
-

5. Configure Roles and ACLs

Roles

Create roles for different stakeholders:

- HR
- IT
- Facilities
- Security
- Manager

ACL Configuration

Navigate to:

System Security & Access Control (ACL)

Configure ACL rules to control:

- Read access
- Write access
- Update permissions

Each role should only access data relevant to their responsibilities.

6. Test Request Submissions

Steps

1. Open **Service Portal**.
2. Search for **Onboard / Offboard Employee** catalog item.
3. Fill in required details.
4. Submit the request.

Verification Checklist

- Request record created.
 - Manager approval triggered.
 - Department tasks generated.
 - Email notifications sent.
 - Lifecycle record updated.
-

Screenshots and Execution Flow

The setup documentation should include:

- Catalog item configuration screenshots.
- Variable setup screenshots.
- UI policy configuration.
- Flow Designer workflow steps.
- Request submission and task generation.

These screenshots help demonstrate the implementation sequence and system behavior.

Expected Result

After completing the setup:

- Onboarding and offboa
