

Phase 5 -- Deployment, Documentation & Final Presentation

Troubleshooting Guide

Date	2026-07-01
Project Name	Automated Employee Onboarding & Offboarding System
Author	AYUB HUSSAIN SHAIK
Organization	SKILLWALLET INTERNSHIP
Document	Troubleshooting

Overview

Proactive troubleshooting was carried out throughout implementation and validation phases to identify and correct issues impacting workflow execution, communication delivery, variable handling, and form functionality. ServiceNow logging systems, Flow Designer analytics, and form validation protocols were leveraged to diagnose and remediate issues ensuring reliable system operation.

Resolution Scenarios

Scenario 1: Flow Engine Execution Problems

Problem Description:

- Workflow operations failing to execute during lifecycle request processing

Diagnostic Method:

- Accessed **Flow Designer** & **Execution Analytics** for operational tracing

Corrective Actions:

- Confirmed trigger activation conditions for catalog submissions
- Checked manager authorization routing specifications
- Validated task creation and notification triggers

Resolution Outcome:

- All workflow operations now execute accurately and complete successfully
-

Scenario 2: Email Delivery Issues

Problem Description:

- Email recipients not obtaining notifications for authorization or task assignments

Diagnostic Method:

- Reviewed email activity in: **System Logs** & **Email** & **Transmission / Receipt**

Corrective Actions:

- Verified email notification delivery for:
 - Manager authorization notifications
 - Department task notifications
 - Request completion confirmations

Resolution Outcome:

- All email notifications now transmit and deliver successfully
-

Scenario 3: Data Field Mapping Issues

Problem Description:

- Catalog inputs failing to correctly populate Employee Lifecycle table columns

Diagnostic Method:

- Analyzed variable specifications and catalog system configurations

Corrective Actions:

- Inspected variable mapping specifications in Flow Designer
- Cross-verified catalog variable nomenclature and database field mappings
- Modified portal input scripts where necessary

Resolution Outcome:

- Ensured accurate mapping of catalog variables to table fields.
-

4. Form Behavior Testing

Issue

- Dynamic form fields not appearing correctly in the Service Portal.

Troubleshooting Method

- Tested UI policies and catalog client scripts.

Actions Taken

- Verified UI policy conditions.
- Ensured correct configuration of show/hide logic.

Example Behavior

- If **Request Type = Onboarding** → **Joining Date** field is displayed.
- If **Request Type = Offboarding** → **Exit Date** field is displayed.

Outcome

- Dynamic form behavior works correctly and improves user experience.
-

Expected Result

- Smooth execution of onboarding and offboarding workflows.

- Proper delivery of system notifications.
 - Accurate data population in lifecycle tables.
 - Improved reliability and usability of ServiceNow forms.
-
