

Phase 5 -- Deployment, Documentation & Final Presentation

Visual Demonstration Guide

Date	2026-07-01
Project Name	Automated Employee Onboarding & Offboarding System
Author	AYUB HUSSAIN SHAIK
Organization	SKILLWALLET INTERNSHIP
Document	Visual Demonstration

Overview

This section provides photographic verification of the implementation and operational execution. Annotated graphics document the system interface, workflow automation, authorization procedures, and messaging infrastructure within the ServiceNow ecosystem.

Visual documentation clarifies the user interface, process automation mechanics, authorization workflows, and stakeholder notification mechanisms governing the lifecycle process.

Visual Documentation Components

Component 1: Service Portal Forms with Conditional Display

Graphics illustrate the **Service Portal entry form** enabling lifecycle request origination.

Documented Capabilities:

- Conditional field rendering based on **Request Category selection**
- Dynamic field behavior regulated through **UI Policies**
- Illustration:
 - If **Request Category = Onboarding** + **Commencement Date** appears
 - If **Request Category = Offboarding** + **Departure Date** appears

Visuals highlight dynamic form adaptation to optimize user interface experience.

Component 2: Authorization Procedure Documentation

Graphics display the **authorization workflow within request activity history**.

Documented Capabilities:

- Manager authorization request automatic generation
- Authorization status modifications visible in transaction history
- Timestamped records documenting authorization actions

This confirms proper authorization workflow implementation.

Component 3: Stakeholder Notification Documentation

Graphics capture **email communications delivered to approvers and departments**.

Documented Notifications:

- Manager authorization request correspondence
- Department task assignment communications
- Request status modification notifications

- Lifecycle completion confirmations

These notifications ensure stakeholder awareness at each lifecycle phase.

Component 4: Process Automation Analytics

Graphics display **Flow Designer operational analytics** during request handling.

Documented Information:

- Flow activation triggered by catalog item submission
- Manager authorization operation execution
- Automated task generation for HR, IT, Facilities, Security
- Status modification and communication delivery operations

Analytics verification confirms correct workflow execution from initialization through completion.

Verification Conclusions

Visual documentation establishes confirmation that:

- The onboarding and offboarding workflows are fully automated.
- Approval routing and task generation function correctly.
- Notifications are triggered at the appropriate stages.
- Flow Designer executes each workflow step successfully.

These visuals validate the complete functionality of the ServiceNow automation solution.
